

I've been asked to request evidence the application was submitted in full and on time to AHPP.

List of all assumptions for financial modelling

Details on **data sources**. What **geographic area** is captured in projections? Are all existing and committed facilities considered? Is the same geographic area being used for hospice need modelling? I didn't see manors listed on any of the recent models presented to municipalities in the region.

Can some examples of the mixed pricing model that are currently operating and generating a surplus in rural Alberta be provided to all of the municipalities that are requisitioned by WHMB?

Regarding the assumption of full capacity - What does modelling predict if it doesn't fill?

Have multiple scenarios been run, and if so, why is that data not being provided?

What percentage of current residents of the lodge would be better served with a higher level of care, such as what will be available at Shasta?

Analysis of **WHMB project to relative need across Alberta**.
